

PROFESSIONAL SUMMARY

AI Systems Engineer building enterprise AI and LLM systems across Azure AI Foundry, retrieval/OCR, tool-calling agents, multi-model evaluation, and private runtime infrastructure. Delivers client-facing automation around messy business data: Kinaxis RapidResponse Q&A, local-first AI workspaces, Azure-backed prototypes, and auditable outputs with citations, logs, schemas, and repeatable artifacts.

TECHNICAL SKILLSETS

Languages

Python, TypeScript, JavaScript, C/C++, Java, Bash

AI/LLM Systems

Azure AI Foundry, Azure OpenAI, RAG, OCR, tool/function calling, MCP, prompt/schema design

Evaluation

LLM benchmarks, multi-model orchestration, structured rubrics, simulation metrics, artifact schemas

Backend/Product

FastAPI, Flask, Express, Node.js, REST APIs, SQLite, Pydantic, Zod

Frontend/Desktop

React, Next.js, Vite, Electron, HTML, CSS

Infra & Cloud

Docker, Docker Compose, Linux, reverse proxies, Microsoft Azure, Azure AI Search, Microsoft Fabric

AI Coding Tools

Codex, OpenCode, OpenClaw, agentic coding workflows

Microsoft Platforms

Copilot Studio, Power Apps

DELIVERY CREDIBILITY

- Converts AI prototypes into shipped artifacts: Electron apps, FastAPI services, Dockerized agents, CLI packages, and rendered reports.
- Designs outputs clients can verify through citations, structured JSON contracts, debug traces, scorecards, and repeatable run artifacts.
- Works across Azure-hosted, local-first, and private infrastructure runtimes to balance integration speed with data-boundary control.
- Treats retrieval, tool use, citations, and failure recovery as baseline product behavior, not demo extras.

DELIVERY PROOF

- Kinaxis work moved worksheet lookup from manual navigation to cited natural-language Q&A.
- Evaluation projects produce inspectable outputs: 4-phase tournaments, 5-axis scorecards, per-call logs, and structured artifacts.
- Private infrastructure practice covers 20+ container operations: routing, monitoring, service recovery, and day-to-day reliability.
- Agentic coding tools are used as a review/debug loop, not a replacement for source control, logs, and verified behavior.

SELECTED AI/LLM PROJECTS

Threads | GitHub

Electron, React, TypeScript, Azure AI Foundry

Local-first desktop AI workspace

- Built an Azure-backed desktop AI workspace with Entra/API-key auth, searchable local history for hundreds of conversations, memory, and retrieval.
- Implemented extraction/OCR for 8+ file families: PDFs, DOCX, PPTX, XLSX, CSV, Markdown, text/code files, and scanned images.
- Added MCP tool discovery/selection, Azure web-search grounding, Claude Foundry routing, and GPT-image generation/editing flows.

Story Tourney | GitHub

Node.js, TypeScript, Next.js, SQLite

Blind multi-model LLM evaluation platform

- Orchestrated 2-4 OpenRouter models through 4 structured phases: generation, blind peer review, revision, and final ranking.
- Added 4 Zod-validated JSON contracts, provider-call archives, encrypted OpenRouter key storage, and deterministic mock fallback.
- Implemented Borda-count scoring with first-place and peer-review tie-breakers for repeatable tournament outcomes.

SemKerBot | GitHub

Python, FastAPI, Semantic Kernel, Docker

Kinaxis supply-chain query agent

- Built a local-only agent/API split where Semantic Kernel tools query a FastAPI wrapper around Kinaxis RapidResponse worksheet data.
- Added 8 diagnostic playbooks, catalog-aware query planning, column-ID filter guidance, and per-call debug metrics.
- Enforced evidence-backed answers with workbook, worksheet, column, row, filter, and exact-value citations.
- Supported Azure OpenAI and local OpenAI-compatible runtimes such as LM Studio/Ollama through configurable deployment settings.

AISB | GitHub

Python, CLI, Simulation, Benchmarking

AI Society Benchmark

- Created an LLM benchmark that runs 5-role artificial societies with resources, trust, influence, resentment, and role-specific actions.
- Refactored toward an 18-module package CLI, canonical data layout, typed artifact schemas, and structured event logs.
- Replaced single-metric judging with 5-axis scorecards for welfare, economy, cohesion, institutions, and anti-degeneracy.

WORK EXPERIENCE

MaSyCoDa Solutions Pvt. Ltd.

Dec 2025 - Present

AI Systems Engineer | Nagpur, India

- Built enterprise AI prototypes across 5 Microsoft/Azure surfaces: Azure Portal, AI Foundry, Azure OpenAI, AI Search, and Fabric.
- Connected Azure AI Foundry agents with Copilot Studio and Power Apps integration surfaces for client-facing automation demos.
- Deployed a Kinaxis RapidResponse supply-chain agent pilot that reduced manual worksheet lookup through evidence-backed Q&A.
- Added 8 diagnostic playbooks, citation requirements, and per-call debug traces to make supply-chain answers repeatable and auditable.
- Used Codex, OpenCode, OpenClaw, and agentic coding harnesses to accelerate implementation, review, debugging, and iteration.

EDUCATION

Shri Ramdeobaba College of Engineering and Management

B.Tech in Computer Science and Engineering
Honors in AI and Data Science
Final CGPA: 7.7 2022 - June 2026

Taywade College

Higher Secondary Certificate 2022

Bhavan's Trimurti Nagar School

CBSE 2020

PRIVATE INFRASTRUCTURE

Operates a private 20+ container Linux infrastructure lab covering self-hosted services, AI tooling, reverse proxy routing, monitoring, and recovery. Uses it to practice deployment discipline, privacy-aware runtime design, and service reliability.
